

# Complete WSL + Envio Setup Guide

## Step 1: Install WSL (If using windows else start from step 2)

1. **Open PowerShell as Administrator**
  - Press **Win + X**
  - Select "Windows PowerShell (Admin)" or "Terminal (Admin)"
2. **Install WSL with Ubuntu**  
`wsl --install`
3. **Restart your computer** when prompted
4. **Complete Ubuntu setup**
  - After restart, Ubuntu will open automatically
  - Create a username and password when prompted
  - Wait for installation to complete

*Open the folder you want to work in using VsCode, then in the terminal type the following command from the steps below.*

## Step 2: Setup your Development environment

- **wsl**
- **pnpx envio init**
- name folder eg. tutorial
- Choose Typescript as language
- Choose blockchain ecosystem eg. evm
- Choose 'Contract Import' as Initialization option
- Choose 'Block Explorer'
- Choose blockchain eg. base
- Enter the contract address to be indexed

## Step 3: Navigate to Your Project

- **cd** into the created dir e.g **cd tutorial**
- **sudo service docker start**
- **sudo service docker status**
- **sudo usermod -aG docker \$USER** (add yourself to docker group to avoid permission error. \$USER is your pc name e.g \$john)
- **sudo chown -R \$USER:\$USER .** (give write permission to the user)
- **chmod -R 755 .** (ensure you have write permission)
- **pnpm run codegen**
- **pnpm envio dev** (start the indexing process)

# Manual Install of wsl (if step 1 above doesn't work)

## Step 1: Manual installation

### 1. Enable WSL feature

```
dism.exe /online /enable-feature /featurename:Microsoft-Windows-Subsystem-Linux /all /norestart
```

### 2. Enable Virtual Machine Platform

```
dism.exe /online /enable-feature /featurename:VirtualMachinePlatform /all /norestart
```

### 3. Restart your computer

### 4. Download and install WSL2 kernel update

- Go to: <https://aka.ms/wsl2kernel>
- Download and run the installer

### 5. Set WSL2 as default

```
wsl --set-default-version 2
```

### 6. Install Ubuntu from Microsoft Store

- Open Microsoft Store
- Search "Ubuntu"
- Install "Ubuntu" (latest LTS version)

## Step 2: Setup Your Development Environment

### 1. Update Ubuntu

```
sudo apt update && sudo apt upgrade -y
```

### 2. Install Node.js and npm

```
curl -fsSL https://deb.nodesource.com/setup_18.x | sudo -E bash -  
sudo apt-get install -y nodejs
```

### 3. Verify installation

```
node --version  
npm --version
```

### 4. Install Git (if not already installed)

```
sudo apt install git -y
```

# Troubleshooting

## A. If WSL installation fails:

- Make sure Windows is updated
- Enable "Windows Subsystem for Linux" in Windows Features
- Run PowerShell as Administrator

## B. If Node.js installation fails: Alternative method using snap

- `sudo apt install snapd`
- `sudo snap install node --classic`

## C. If you can't access Windows files:

- List available drives  
`ls /mnt/`
- Access C: drive  
`cd /mnt/c/`

## D. If Envio still has issues:

- Try with npx instead  
`npx envio init`
- Or install specific version  
`npm install -g envio@latest`

# Quick Command Reference

1. Start WSL from Windows  
**`wsl`**
2. Exit WSL  
**`exit`**
3. Access WSL from VS Code  
**`code .`**
4. Update packages  
**`sudo apt update && sudo apt upgrade`**
5. Check WSL version  
**`wsl --list --verbose`**

## Pro Tips

1. **Pin WSL to Taskbar:** Right-click Ubuntu in Start Menu → Pin to Taskbar
2. **Use Windows Terminal:** Install Windows Terminal for better WSL experience
3. **File Performance:** Keep your project files in WSL filesystem (`~/`) for better performance
4. **Backup:** Your WSL files are in: `\\wsl$\\Ubuntu\\home\\yourusername\\`

You're now ready to use Envio in WSL! 🎉
